We believe that our portfolios have outperformed the major indices over the last 2 years because of several reasons. First, portfolio recommendations are selected from a pool consisting of those companies, which rank among the top 5% of all companies having the best cash flow metrics according to StockDiagnostics.com. Second, portfolio recommendations are continuously monitored by StockDiagnostics.com for changes in cash flow and other metrics. Third, financial companies are not recommended in our portfolios. Fourth, our portfolios are more diversified than most mutual funds. Finally, we recommend conservative hedging strategies for our portfolios when necessary.
